CROWNS

Pacific Smiles Dental Centres offer patients the opportunity to restore their beautiful smile and enhance functionality with custom-made crowns.

Crowns are used in restorative (or functional) and cosmetic dental treatments. A custom-made crown fits over the prepared existing natural tooth and replaces the natural crown, which is the part of the tooth that is visible above the gums. A new crown adds strength, durability and tooth stability, as well as enhancing the appearance of the tooth.

Crowns are often required when a tooth has been severely weakened and is no longer structurally sound due to tooth decay, previous root canal therapy or wear over time. Crowns can also be used to brighten and improve the appearance of one's smile by covering broken, chipped, stained or discoloured teeth or by modifying the shape of a tooth.

Porcelain crowns are custom-made for each individual patient and can be matched to existing teeth making them a perfect cosmetic enhancement option.

The process of constructing a crown generally requires two appointments with your dentist. During the first appointment the existing tooth is prepared for the crown, impressions are taken and a temporary crown is placed over the prepared tooth. At the next visit, the temporary crown is replaced by the new crown which is fitted, adjusted and cemented in place, providing a more permanent natural looking aesthetic solution.

All procedures at Pacific Smiles Dental Centres are carried out using state-of-the-art equipment in modern, friendly facilities which offer the convenience of extended opening hours. Sterilisation and infection control practices at Pacific Smiles Dental are subject to the highest quality standards for the health and safety of patients, employees and practitioners.

For more information on how crowns can restore function and give you a beautiful smile, visit www.pacificsmilesdental.com.au or contact your local Pacific Smiles Dental Centre.
